# ThreadBurr

*The Master of Threading*

Threading and deburring  
in one operation

No additional time  
for deburring

# THREAD MILLING

## CONTENTS

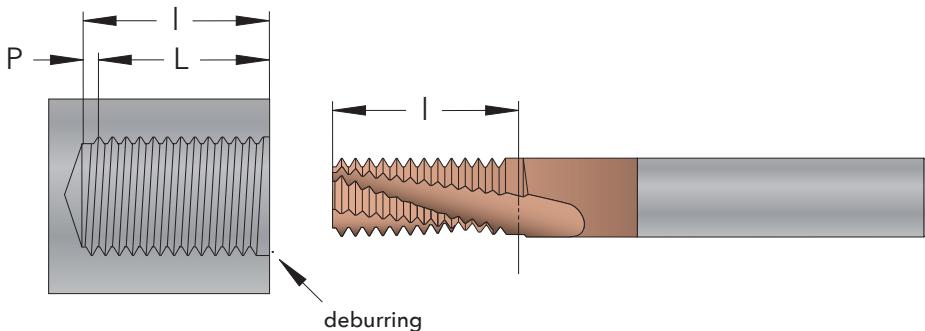

Technical Information	4	A schematic diagram showing a cylindrical workpiece being machined by a threaded cutter. An arrow labeled 'F' indicates the direction of material removal, and a curved arrow labeled 'N' indicates the rotational motion of the cutter.
Solid Carbide Thread Mills, ThreadBurr	12	A cross-sectional view of a solid carbide thread mill. The left side shows the threaded cutting portion, and the right side shows a straight shank with a chamfered end.
with Chamfer	17	A cross-sectional view of a solid carbide thread mill. The left side shows the threaded cutting portion, and the right side shows a straight shank with a central bore for internal coolant.
with Internal Coolant	18	A cross-sectional view of a solid carbide thread mill. The left side shows the threaded cutting portion, and the right side shows a straight shank with a central bore and a side port for internal radial coolant.
with Internal Radial Coolant	19	A cross-sectional view of a solid carbide thread mill with a single cutting tooth at the end of a straight shank.
with One Tooth	20	A cross-sectional view of a solid carbide thread mill with two cutting teeth at the end of a straight shank.
with Two Teeth	21	A cross-sectional view of a tapered end mill with a helical fluted profile, designed for cutting threads like NPT or BSPT.
Tapered End Mills for NPT/NPTF/BSPT	16	Four small, rectangular inserts with straight flutes and a central hole, used for straight slotting operations.
Straight Fluted Inserts	22	Four small, rectangular inserts with spiral flutes and a central hole, used for improved chip control and reduced vibration.
Thread Milling Cutters	24	A long, cylindrical cutter with multiple flutes and a square cross-section, designed for high efficiency thread machining.
Spiral Fluted Inserts	26	A long, cylindrical cutter with integrated spiral flutes along its length, designed for improved chip control and reduced vibration.
Thread Milling Cutters	28	A long, cylindrical cutter with integrated spiral flutes and a stepped shank, designed for high efficiency and precision.

## ThreadBurr

The advantage with ThreadBurr is that you can thread and deburr in one operation. No additional time for deburring and countersink is needed. The deburring operation is made automatically when thread milling, which gives you the deburring without any extra costs.

There is no disadvantage to use the ThreadBurr, even if you don't use the deburring function. ThreadBurr is standard on all thread mills from SmiCut.

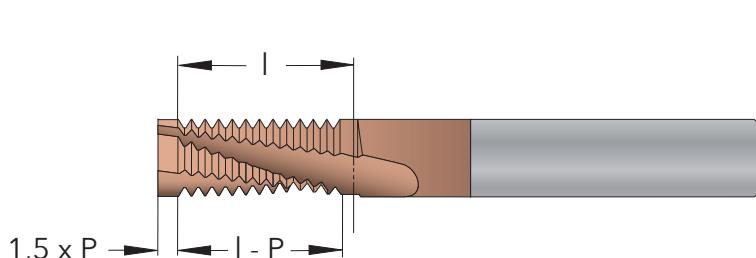

To get a nice entry and a burr free thread you need to start out with going to full depth (I) in to the hole before starting the threading operation. The thread length (L) will be the cutting length (I) minus one pitch (P).

### Double ThreadBurr

It is possible to get the thread deburred on both sides. For this operation you need to use a special tool as thread length depends on the thickness of the material. Have in mind the following when you order a tool for deburring on both sides.

- The cutting length (I) should be equivalent to the thickness of the material.

### Example

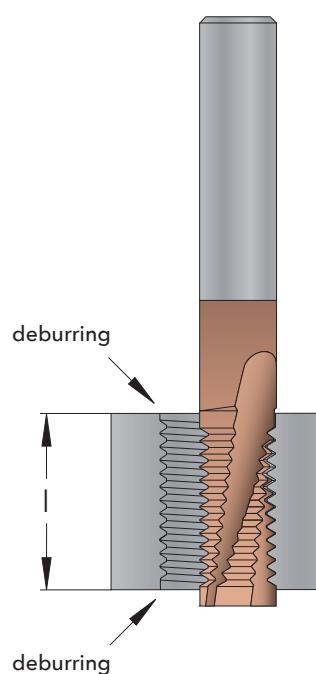

M30x3 thread length 40 mm

$$40 / 3 = 13,3$$

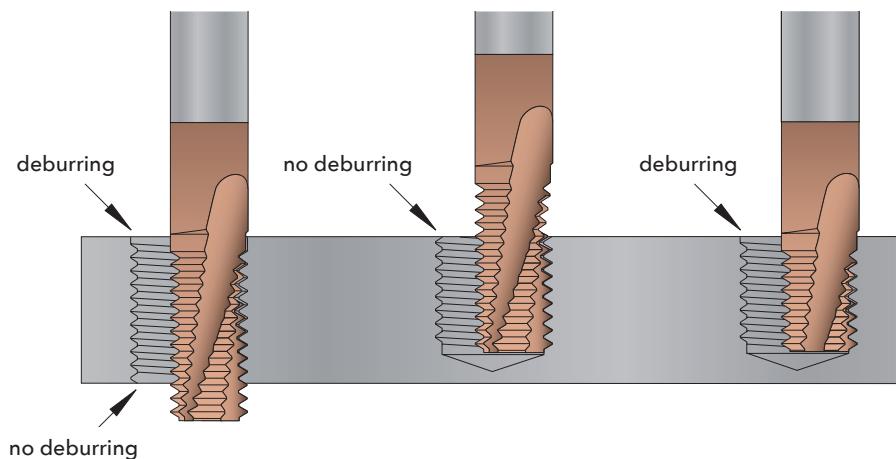

$$13 \times 3 = 39,0 \text{ mm}$$

Number of pitches  
Cutting length (I)

Thread Milling with NBB2020D39\_3.0ISO\_AC (I = 39,0 mm)

## ThreadBurr

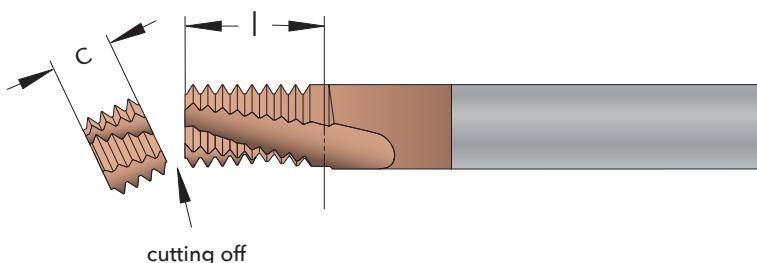

## Through holes

You can always use a standard tool for through holes. Please take in mind you should use a tool as short as possible to get best stability and economy.

## Blind Holes

With blind holes it is important to have the correct cutting length ( $l$ ) on the tool to get the thread deburred. Normally you will find a suitable standard tool. If not, we will cut the tool to the correct length with extremely short delivery time and at a reasonable price. Have in mind the following when you order a tool for blind holes.

- The cutting length ( $l$ ) should be required thread length ( $L$ ) plus one pitch ( $P$ ).
- The distance to cut off ( $c$ ) has to be dividable by the pitch ( $P$ ).

## Example

M16x1,5 thread length 24 mm

Thread Milling with NB1212D29\_1.5ISO\_AC ( $L = 29,25$  mm)

$24 + 1,5 = 25,5$ mm	Required cutting length ( $l$ )
$29,25 - 25,5 = 3,75$ mm	Maximum cutting off
$3,75 / 1,5 = 2,5$	Number of pitches to cut off
$2 \times 1,5 = 3,0$ mm	Distance to cut off ( $c$ )
$29,25 - 3,0 = 26,25$ mm	Cutting length ( $l$ ) after cutting off
$26,25 - 1,5 = 24,75$ mm	Thread length ( $L$ ) after cutting off

You only need to cut off the tool when you want to use the deburring function on blind holes and if there is no standard tool with suitable cutting length.

## Advantages

### ■ 1) A secure machining operation

Minimal risk for machining stops as the cutting forces are low and the chips are short. Should there be an accident, the work piece will not be destroyed, as the tool will not be caught since the diameter of the thread mill is less than the thread.

### ■ 2) Threading in difficult machined materials

The excellent cutting conditions makes it possible to thread mill materials such as hardened steel up to HRC 65, Titanium and other difficult machined materials.

### ■ 3) Higher thread quality

The cutting conditions are extremely good when you are thread milling. The result of the thread is a higher quality of surface finish, tolerance, angle, etc. compared with other threading methods.

### ■ 4) Flexible tool

Same cutter can be used for right hand and left hand thread. Threads with different diameters can be made with the same tool as long as the pitch is the same. The same thread mill can be used for blind holes and through holes. W, BSPT, PG, NPT, NPTF and NPSF are thread profiles where you can use the same tool for external and internal thread.

### ■ 5) Threading in blind holes

When thread milling you will get a complete thread profile to the bottom of the hole. When tapping it's necessary to drill much deeper as it's not until the third thread the tap will make a complete thread profile. Sometimes you are able to change the construction as you don't have to take the deep hole into consideration.

### ■ 6) Less wear on the machine spindle

Thread milling will give you longer life to the machine spindle compared with tapping as the rotation on the spindle doesn't need to be stopped and reversed for every thread.

### ■ 7) Energy-saving production

Low energy consumption as the machine spindle doesn't need to be stopped and started after each thread.

### ■ 8) Thread Milling in a lathe with live tools

Reduced machining time compared with thread turning. Excellent chip control.

### ■ 9) Threading without burrs

The thread entrance will be burr free when using ThreadBurr. Threading and deburring in one operation. No additional time for deburring.

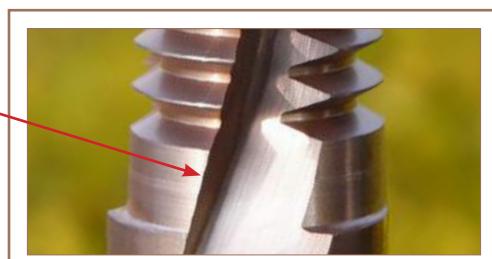

### ■ 10) Shorter machining time

The machining time will be short as you don't need to chamfer the thread while using ThreadBurr. Big diameters, fine pitches and long holes saves the most time compared with thread tapping.

### ■ 11) Correct Thread Diameter right away

The Pitch diameter has been optically measured on thread mills from SmiCut and the theoretical external diameter has been individually laser marked on each cutter so you will get a correct thread straight away. When the tool starts to wear it's possible to make adjustments in the CNC-program.

Deburring of the thread

### How to choose correct Thread Mill Diameter

When thread milling, the diameter of the tool has to be smaller than the thread diameter. The reason for this is that the thread has a helix angle, but the tool is straight. If the tool is too big there will be a deviation on the thread profile. The size of this deviation depends on several parameters.

- 1) Thread diameter
- 2) Cutter diameter
- 3) Profile angle
- 4) Pitch

Big cutter diameter compared with thread diameter, small profile angle and big pitch. These are parameters that gives bigger deviation.

There are three alternatives to choose correct thread mill diameter.

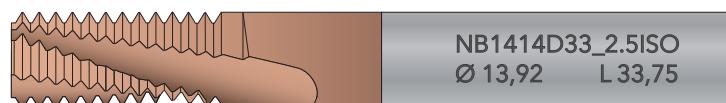

- 1) SmiCut Catalogue
- 2) SmiCut Online Store, [www.smicutstore.se](http://www.smicutstore.se) (see page 8)
- 3) SmiProg Software, [www.smicut.se](http://www.smicut.se) (see page 9)

### How to get correct Thread Diameter

The pitch diameter has become optically measured on thread mills from SmiCut and the theoretical external diameter has been individually laser marked on each cutter. This diameter is what you should use in your program to get a correct diameter on your thread.

For coarse threads you are normally in the middle of the tolerance if you use the laser marked value.

Fine threads may be a little bit tight as you get a very small thread profile deviation on these threads (see above). If this is the case you can mill again after adjusting the diameter in your program.

### How to get a burr free Thread

Thread Mills from SmiCut (ThreadBurr) will give you a nice entry and a burr free thread. The cutting length is laser marked on the tool and you can find it as well in the catalogue. This is the distance you should go in to the hole from the surface to get a perfect entry.

## Select correct Thread Mill

SmiCut Online Store will help you find suitable tools

If you need a Thread Mill for a specific thread and you need help to find the correct tool, just go to [www.smicutstore.se](http://www.smicutstore.se) and you will very quickly find suitable tools.

Example: M16 with thread length 32 mm

- 1) Choose THREAD MILLING Application on the left side
- 2) Choose M - Metric coarse
- 3) Choose M16
- 4) Choose what kind of tool you want, for example without coolant

Now you can see all solid carbide thread mills without coolant that are able to produce M16. From these ones you have to take a tool with a cutting length of at least 32 mm. You can see the cutting length on the part number (see next page for more information about "code key"). The most suitable tool is NB1212D35\_2.0ISO\_AC. If you want complete information about the dimensions press on the part number of the tool.

You are as well able to do this thread with a tool with a smaller diameter or longer thread length, but this result in longer machining time and/or not as good cutting conditions. Sometimes you choose this anyhow as you may already have the tool, the price is less or you want to have a tool that can make different sizes of threads.

To check machining time and cutting conditions for different tools, please use "SmiProg" (see next page).

### SmiProg makes it easy to Thread Mill

Specify control system, material, thread diameter, pitch and thread length. The program will recommend suitable tools. Choose one and you will receive suggested cutting data, time to mill the thread and CNC programming code. The software is made in excel and is less than 500kb even though it includes 22 different languages. You can download SmiProg free of charge at [www.smicut.se](http://www.smicut.se)

### Tutorial Video Series

Learn how to use SmiProg and our Thread Mills with video tutorials. Following videos are available. More parts will be uploaded in the future.

Part 1: Introduction

Part 2: The Basic Features

Part 3: ThreadBurr & Correct Diameter

## Example

M24x3,0 thread length 36 mm  
 Carbon Steel, up to 400 N/mm<sup>2</sup>  
 Thread Milling with NB1616C40\_3.0ISO\_AC  
 $B = 0,54 \times 3 = 1,62 \text{ mm}$   
 $B/d = 1,62/16 = 0,10$   
 $L/d = 36/16 = 2,25$   
 $F_z = 1,2 \times 0,61 \times 0,067 = 0,049$   
 $n = (160 \times 1000) / (\pi \times 16) = 3183 \text{ rpm}$   
 $V_{fD} = 0,049 \times 3 \times 3183 = 468 \text{ mm/min}$   
 $V_{fd} = 468 \times (24-16) / 24 = 156 \text{ mm/min}$   
 $T = (278 \times 24) / 468 = 14 \text{ seconds}$

$$B = 0,54 \times P$$

$$F_z = F_m \times F_e \times F_d$$

$$n = \frac{V_c \times 1000}{\pi \times d}$$

$$V_{fD} = F_z \times z \times n$$

$$V_{fd} = V_{fD} \times \frac{(D - d)}{D}$$

$$T = 278 \times \frac{D}{V_{fD}}$$

D = thread diameter (mm)

L = thread length (mm)

d = cutter diameter (mm)

B = depth of profile (mm)

P = pitch (mm)

z = no. of flutes

$F_z$  = feed / flute (mm/flute)

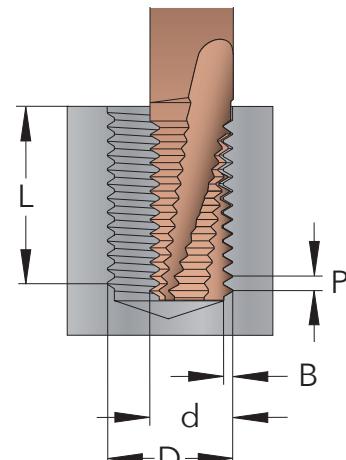

n = spindle speed (rpm)

$V_c$  = cutting speed (m/min)

$V_{fD}$  = feed at thread diameter Ø (mm/min)

$V_{fd}$  = feed at center of mill (mm/min)

T = time to mill the thread (seconds)

## Carbide Grades

AC

Micrograin Carbide with TiAlCN coating.  
 Allround Grade with low friction.  
 Use cutting data according to the tables.

FC

Micrograin Carbide with TiAlN coating.  
 Allround Grade with high heat resistance.  
 Use cutting data according to the tables.

## ThreadBurr

**AC**

TiAlCN coated  
Micrograin Carbide

**Tolerance**

The theoretical external diameter of the cutter is lasermarked on the tool.

**Shank**

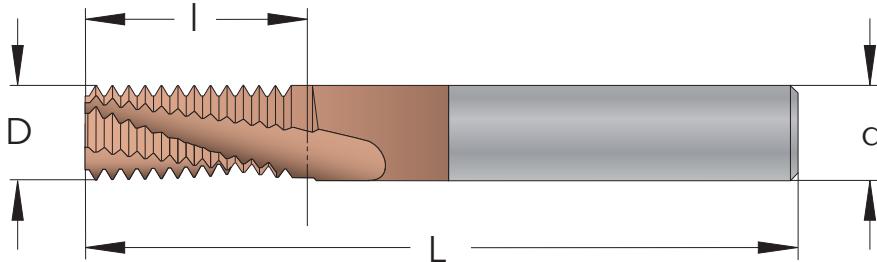

Cylindrical h6, DIN6535 HA

**Flute**

15° right hand spiral

**Field of application**

Thread Milling of all types of steel

**with Two Teeth****AC**

TiAlCN coated

Micrograin Carbide

**Tolerance**

The theoretical external diameter of the cutter is lasermarked on the tool.

**Shank**

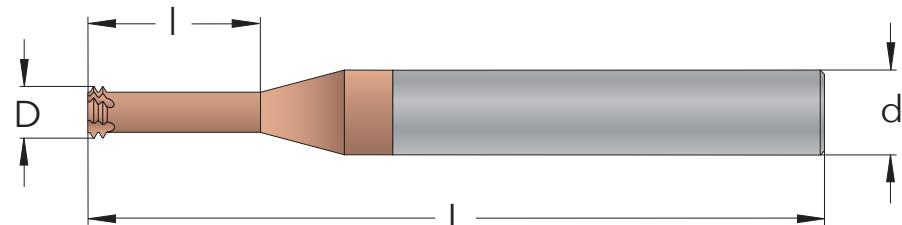

Cylindrical h6, DIN6535 HA

**Flute**

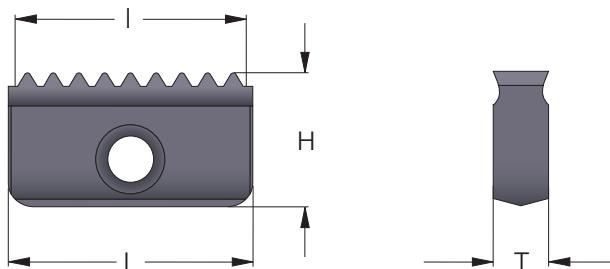

15° right hand spiral

**Field of application**

Thread Milling of all types of steel

**Advantages**

# Cost-effective

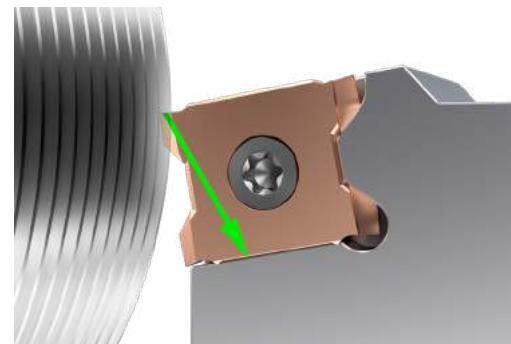

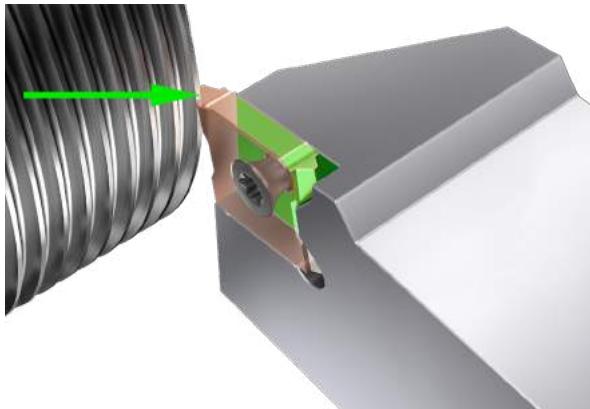

## Four Cutting Edges - for the Price of Three

As the price for the inserts are the same, the FourCut threading insert is 25% cheaper as it has four cutting edges instead of three.

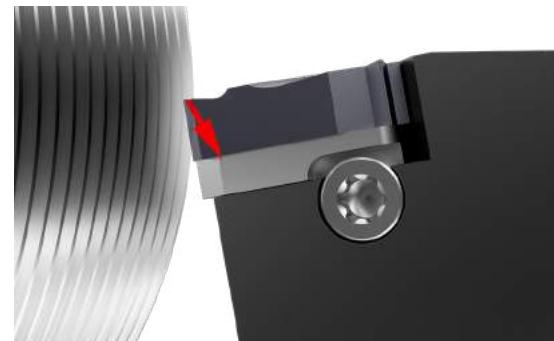

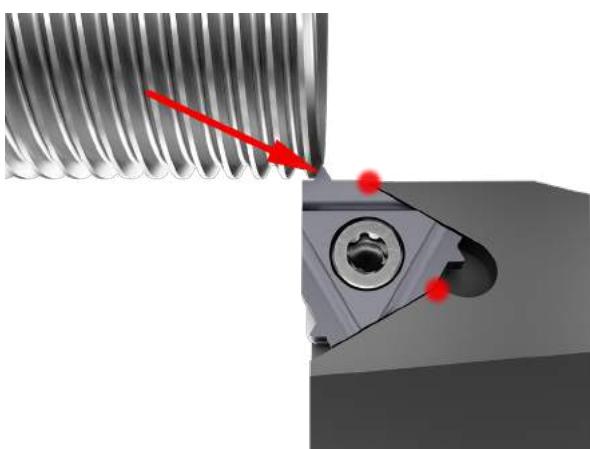

# Strength

## Strong and Stable Machining

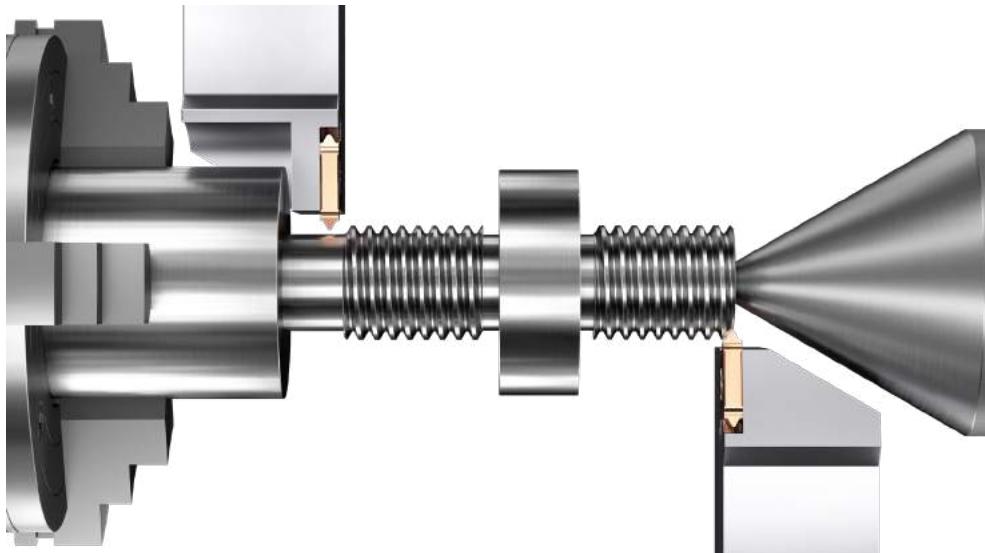

FourCut is a vertical insert. This gives a very strong insert. The cutting forces go in to the insert and you don't need any anvil as the carbide insert take up the forces.

No problem with the side forces as the flat surface of the insert take up these forces.  
No weak point on the toolholder.

**Advantages**

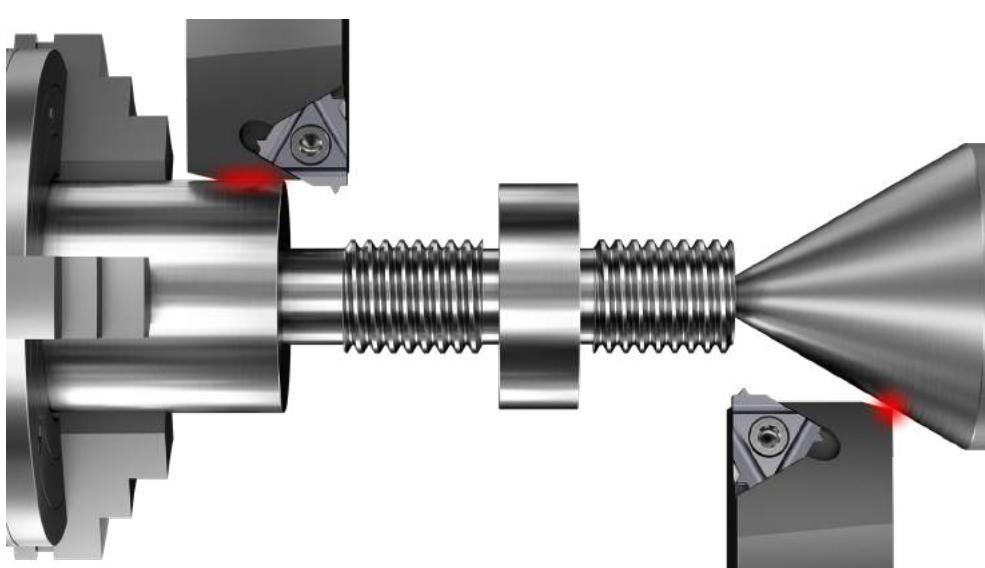

# Accessibility

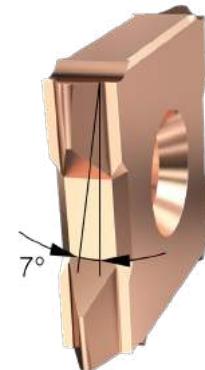

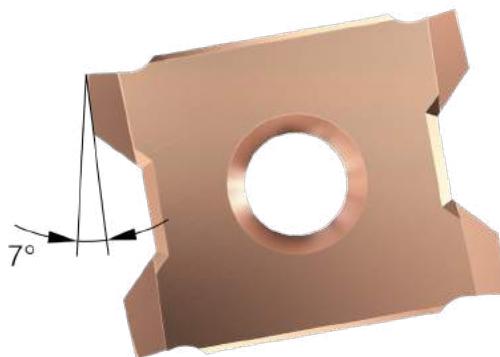

## Minimum Waste of Material

With a vertical insert the accessibility gives you two main advantages.

- 1) Less waste of material as you don't need to turn away material to be able to make the thread.
- 2) As you have more space you can use a live center when you are turning small diameters. This will give you a stable machining and a better quality of the thread.

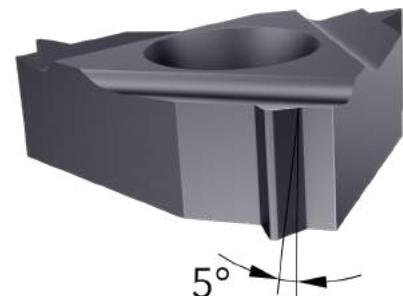

# Optimal Clearance

## Perfect Cutting Conditions

The inserts are ground on all sides with a complex grinding technology on 6-axis grinding machines to get a 7° clearance angle all around the thread profile which gives the following advantages:

- 1) Extra clearance on the flanks gives better cutting conditions.
- 2) Same toolholder for different helix angles as the extra clearance allow you to have bigger difference in helix angle.
- 3) Less clearance on the radius gives stronger cutting edge and longer tool life.

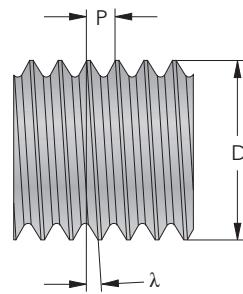

# THREAD TURNING INSERTS

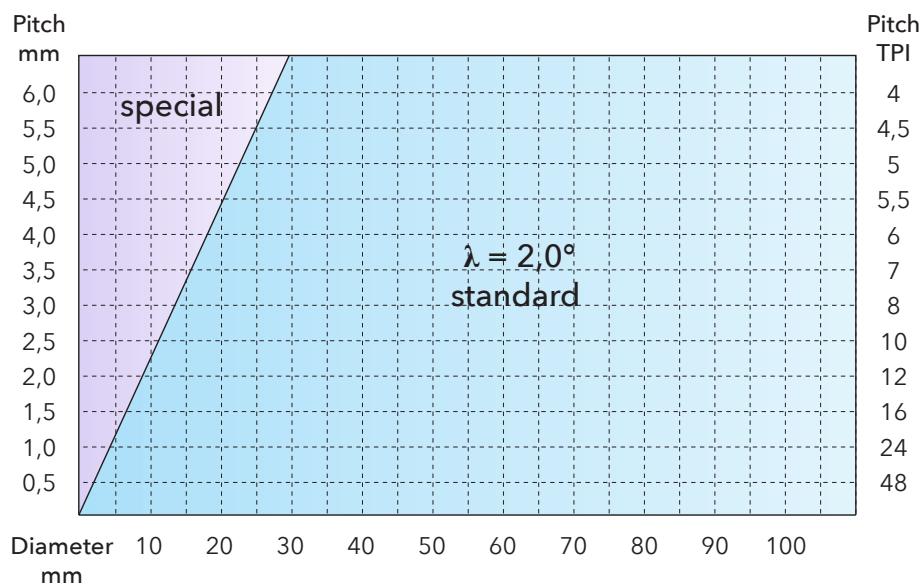

## Helix Angle

To get good cutting conditions the threading insert has to be inclined into the toolholder at approximately the same angle as the helix angle of the thread.

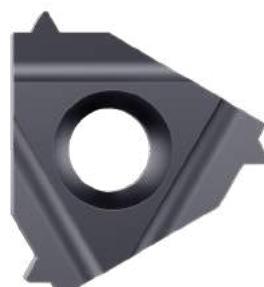

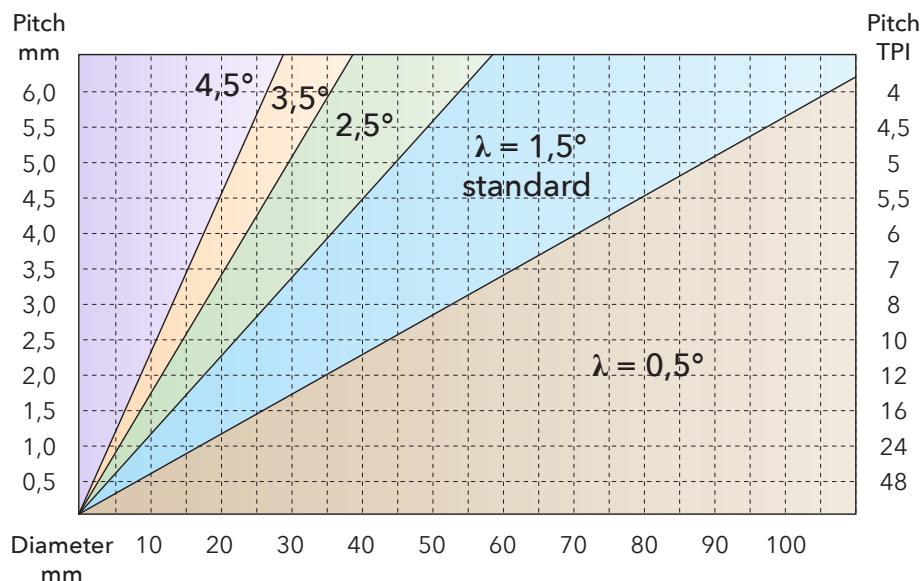

$$\tan \lambda = \frac{P}{\pi \times D}$$

The FourCut inserts has extra clearance on the flanks and therefore it is not so important to have correct helix angle. The standard toolholder has 2° helix angle and it is possible to make almost all threads with the same holder.

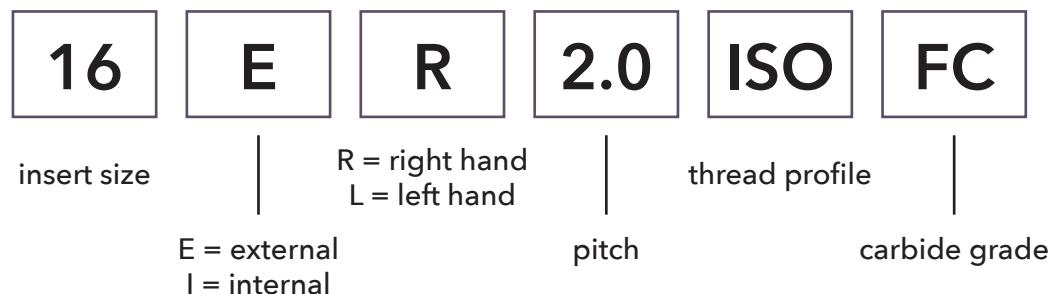

On the triangular inserts it is more important to have a similar helix angle on the toolholder as the thread. The standard toolholder has an anvil which gives 1,5° helix angle. If you need bigger or smaller, you just change the anvil.

**Carbide Grades****FC**

Micrograin Carbide with TiAlN coating.  
Allround Grade with high heat resistance.  
Use cutting data according to the tables.

**BC**

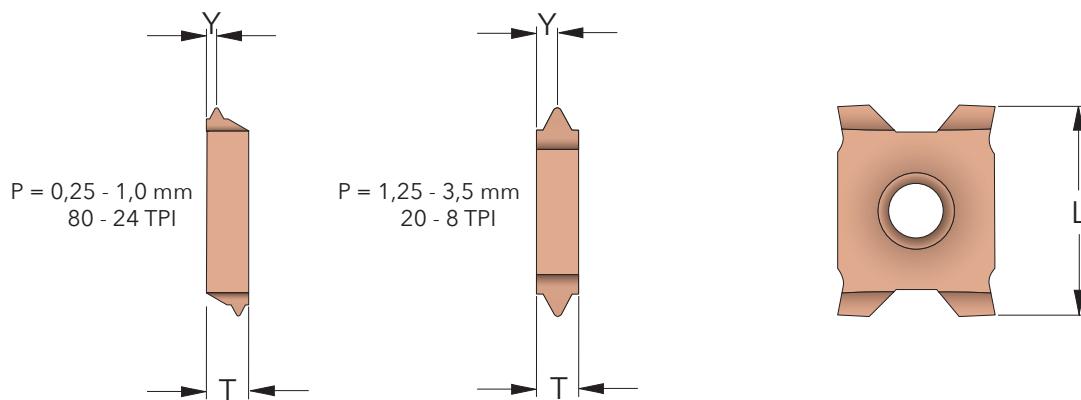

Micrograin Carbide with TiN coating.  
Suitable for internal thread turning of small dimensions. Cutting speed 40% less than FC.

**HC**

Micrograin Carbide with AlTiSiN coating.  
Allround Grade with high hardness and heat resistance.  
Use cutting data according to the tables.

### WHITWORTH PIPE THREAD

Pitch TPI	Part Number EXTERNAL	L mm	T mm	Y mm	Radial infeed per pass	Price EUR
14	12ER_14W2M_HC	12	3,6	2,7	1 0,55 2 0,38 3 0,25	34,60

### Advantages with Multitooth Inserts

With multitooth inserts the machining time can be reduced about 50% as two cutting edges are working every pass.

The first edge will cut the flanks of the thread and the second one will make the root radius. This will result in three easy breakable chips.

It is important to use radial infeed to get best performance. Above you have recommended infeed per pass for each insert.

12	SER2525T18M12	25	150	25	18	23,8	126,20

## Maximum Allowable Access

When you are working between shoulders there is a limit of the accessibility which depends on the toolholder and the diameters of the workpiece.

$$R_{\max} = \sqrt{(r + 2,5)^2 + Y^2}$$

$$T = R - r$$

You should never exceed the calculated  $R_{\max}$  or the  $T$  dimension of the toolholder. If you need better accessibility you have to modify the holder.

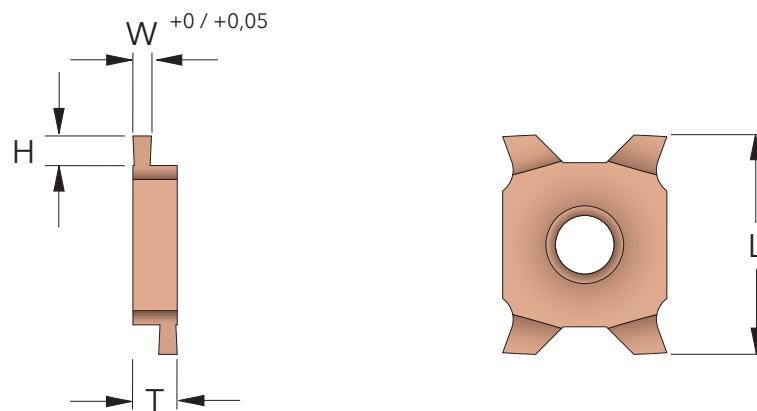

For diagram of accessibility go to [smicut.com/acc](http://smicut.com/acc)

## Minimum Bore Diameter

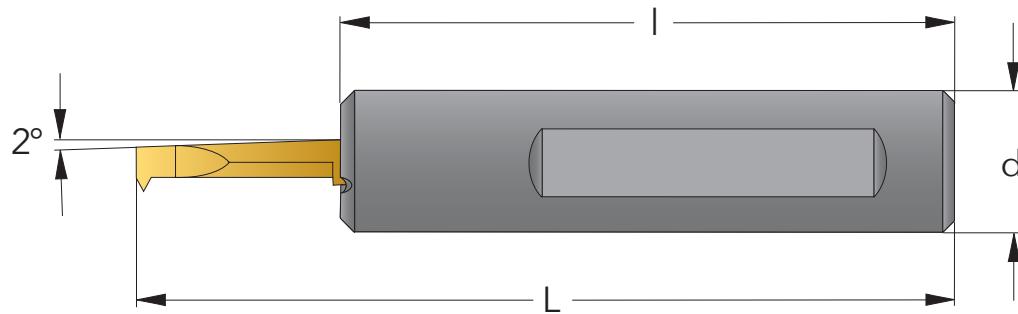

To obtain highest possible stability the threading inserts are ground in an angle of 2°. Therefore the minimum bore diameter is dependent on the thread length according to the table below.

D mm	Thread Length (mm)															
	2	4	6	8	10	12	14	16	18	21	24	27	30	35	40	45
0,8	0,87	0,94														
1,6	1,67	1,74	1,81													
2,2	2,27	2,34	2,41	2,48	2,55											
3,0	3,07	3,14	3,21	3,28	3,35	3,42										
4,0	4,07	4,14	4,21	4,28	4,35	4,42	4,49	4,56								
5,0	5,07	5,14	5,21	5,28	5,35	5,42	5,49	5,56	5,63	5,74						
6,0	6,07	6,14	6,21	6,28	6,35	6,42	6,49	6,56	6,63	6,74	6,84	6,95				
8,0	8,07	8,14	8,21	8,28	8,35	8,42	8,49	8,56	8,63	8,74	8,84	8,95	9,05	9,23	9,40	9,58

■ Minimum Bore Diameter = D + (thread length x 0,035)

 F = six flute

## Engagement Factor ( $F_e$ )

	<b>Side Milling</b> $a_e = 0,1 \times D$	$a_e = 0,25 \times D$	$a_e = 0,5 \times D$	$a_e = 0,75 \times D$	<b>Slot Milling</b> $a_e = 1,0 \times D$
$a_p = 0,25 \times D$	3,5	1,8	1,4	1,2	1,0
$a_p = 0,5 \times D$	3,0	1,5	1,2	0,9	0,7
$a_p = 0,75 \times D$	2,5	1,3	1,0	0,7	0,6
$a_p = 1,0 \times D$	2,0	1,1	0,8	0,6	0,5
$a_p = 1,25 \times D$	1,7	0,9	0,6		
$a_p = 1,5 \times D$	1,4	0,7			
$a_p = 2,0 \times D$	1,2	0,5			
$a_p = 2,5 \times D$	1,0				
$a_p = 3,0 \times D$	0,8				

### Side Milling

$$F_z = F_m \times F_e \times F_d$$

### Slot Milling

## Diameter Factor ( $F_d$ )

D	Diameter Factor ( $F_d$ )
0,5	0,004
1,0	0,006
2,0	0,009
3,0	0,012
4,0	0,016
5,0	0,022
6,0	0,032
8,0	0,045
10,0	0,056
12,0	0,074
14,0	0,086
16,0	0,098
18,0	0,110
20,0	0,122
25,0	0,135
32,0	0,145
40,0	0,155

$$n = \frac{V_c \times 1000}{\pi \times D}$$

$$V_f = F_z \times z \times n$$

### Example

Side Milling with M1010D25 LC  
Standard Length Four Flute End Mill  
Carbon Steel, up to 700 N/mm<sup>2</sup>  
 $D = 10 \text{ mm}$   
 $a_p = 1,0 \times D = 10 \text{ mm}$   
 $a_e = 0,25 \times D = 2,5 \text{ mm}$   
 $F_z = 1,1 \times 1,1 \times 0,056 = 0,068 \text{ mm/flute}$   
 $n = (130 \times 1000) / (\pi \times 10) = 4138 \text{ rpm}$   
 $V_f = 0,068 \times 4 \times 4138 = 1126 \text{ mm/min}$

## Carbide Grades

Super Micrograin Carbide with AlCrN coating.  
Allround Grade with extremely high heat resistance. Use cutting data according to the tables.

Uncoated Super Micrograin Carbide.  
For Aluminium. Use cutting data according to the tables.

Micrograin Carbide with TiAlN coating.  
Allround Grade with high heat resistance.  
Use cutting data according to the tables.

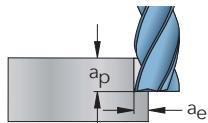

Micrograin Carbide with Diamond coating.  
For Graphite. Use cutting data according to the tables.

# SIDE MILLING

### Cutting Speed ( $V_c$ ) and Material Factor ( $F_m$ )

MATERIAL		Hardness HB	Tensile Strength N/mm <sup>2</sup>	Cutting Speed ( $V_c$ ) m/min	Material Factor ( $F_m$ )
Steel	Low carbon, C < 0,25%	< 120	< 400	80 - 120	1,2
	Medium carbon, C < 0,55%	< 200	< 700	70 - 110	1,1
	High carbon, C < 0,85%	< 250	< 850	60 - 100	1,0
	Low alloy	< 250	< 850	60 - 100	1,0
	High alloy	< 350	< 1200	40 - 60	0,9
	Hardened, HRC < 45			30 - 50	0,8
	Hardened, HRC < 55			20 - 30	0,7
	Hardened, HRC < 65			15 - 25	0,6
	Lamellar graphite	< 150	< 500	70 - 110	1,2
	Lamellar graphite	< 300	< 1000	60 - 100	1,1
Cast iron	Nodular graphite, malleable	< 200	< 700	50 - 80	1,0
	Nodular graphite, malleable	< 300	< 1000	40 - 70	0,9
	Free machining	< 250	< 850	40 - 55	1,0
	Austenitic	< 250	< 850	30 - 45	0,9
Stainless steel	Ferritic and austenitic	< 300	< 1000	25 - 40	0,8
	Unalloyed	< 200	< 700	35 - 50	0,8
	Alloyed	< 270	< 900	25 - 40	0,7
Titanium	Alloyed	< 350	< 1250	20 - 35	0,6
	Unalloyed	< 150	< 500	40 - 55	0,8
	Alloyed	< 270	< 900	25 - 35	0,7
Nickel	Alloyed	< 350	< 1250	20 - 30	0,6
	Unalloyed	< 150	< 500	40 - 55	0,8
	Alloyed	< 270	< 900	25 - 35	0,7
Copper	Unalloyed	< 100	< 350	80 - 160	1,0
	Brass, bronze	< 200	< 700	70 - 150	1,0
	High strength bronze	< 470	< 1500	50 - 70	0,8
Aluminium	Unalloyed	< 100	< 350	200 - 300	1,4
	Alloyed, Si < 0,5%	< 150	< 500	150 - 250	1,3
	Alloyed, Si < 10%	< 120	< 400	100 - 200	1,2
	Alloyed, Si > 10%	< 120	< 400	80 - 160	1,1
Inconel	718	< 370		20 - 30	0,6
Graphite				100 - 200	1,0

■ 20% higher cutting speed is recommended for drill with internal coolant.

### Code Key

DK	10	091	B	61	FC

10,0	0,34	0,27	0,24
12,0	0,38	0,30	0,27
14,0	0,41	0,33	0,29
16,0	0,44	0,35	0,31
18,0	0,46	0,37	0,32
20,0	0,50	0,40	0,35

## Example

Drilling with D10100B47 FC (3xD)

Carbon Steel, up to 700 N/mm<sup>2</sup>

D = 10,0 mm

$$F_n = 1,1 \times 0,34 = 0,37 \text{ mm/r}$$

$$n = (90 \times 1000) / (\pi \times 10) = 2865 \text{ rpm}$$

$$V_f = 0,37 \times 2865 = 1060 \text{ mm/min}$$

$$F_n = F_m \times F_d$$

$$n = \frac{V_c \times 1000}{\pi \times D}$$

D = drill diameter (mm)

F<sub>n</sub> = feed / rev. (mm/r)

n = spindle speed (rpm)

V<sub>c</sub> = cutting speed (m/min)

V<sub>f</sub> = table feed (mm/min)

$$V_f = F_n \times n$$

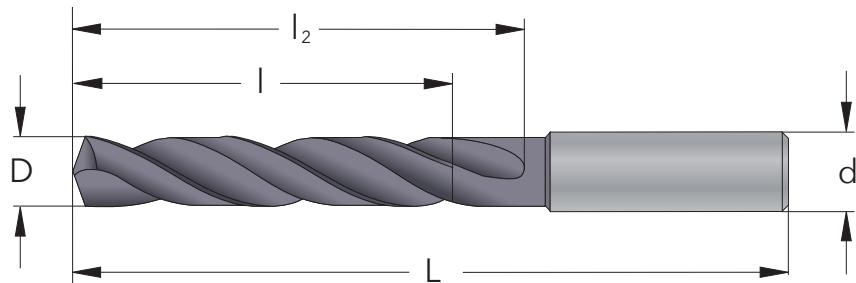

Super Micrograin Carbide with TiAlN coating.  
Allround Grade with high heat resistance.  
Use cutting data according to the tables.

■ SmiCut supply rectangular carbide rods

## Metric

### M16 x 1.5 - 5g6g - LH

Thread profile according to ISO metric standard

Major diameter

Pitch

- Left or right handed thread
- Tolerance position for major diameter
- Tolerance grade for major diameter
- Tolerance position for pitch diameter
- Tolerance grade for pitch diameter

All types and tolerance classes can be produced with ISO metric thread turning and thread milling tools.

For coarse threads, the pitch is not written as it is determined of the diameter, for example M16 instead of M16 x 2.

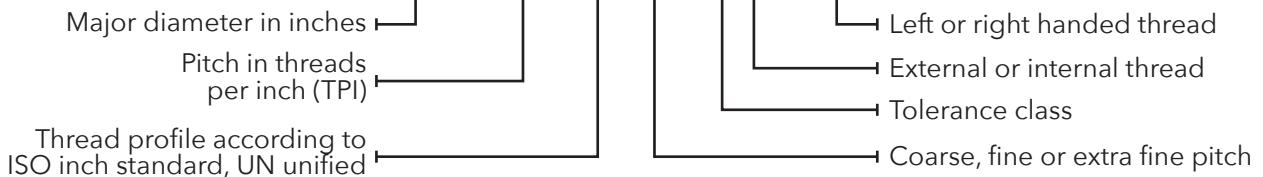

If the tolerance grade and position is the same for pitch and major diameter, it is written only once, for example 6h instead of 6h6h. Small letter for external threads and capital letter for internal threads. If no tolerance class is written, it means that the tolerance is 6H/6g. Slash between tolerances provide information about the internal and external thread.

It is not necessary to write RH for right hand thread as almost all threads are right handed.

M16 is a simplified writing of M16 x 2 - 6H/6g - RH.

Thread Profile Depth	
external	0,613 x pitch
internal	0,541 x pitch

Major diameter mm Serie 1	Serie 2	Serie 3	Pitch mm
M1			0,25
	M1,1		0,25
M1,2			0,25
	M1,4		0,3
M1,6			0,35
	M1,8		0,35
M2			0,4
	M2,2		0,45
M2,5			0,45

M56			5,5
	M60		5,5
M64			6
	M68		6

**1/4 - 20 UNC - 2A - LH**

All types and tolerance classes can be produced with UN unified thread turning and thread milling tools.

When the thread is smaller than 1/4", the diameter is given with a number from No. 0 to No. 12 (No. # x 0.013" + 0.060").

Mostly, the pitch is not written as it is determined of the diameter for UNC, UNF and UNEF threads.

If no tolerance class is written, it means that the tolerance is 2A for external threads and 2B for internal.

It is not necessary to write RH for right hand thread as almost all threads are right handed.

1/4 - UNC is a simplified writing of 1/4 - 20 UNC - 2A/2B - RH.

UNC	thread with coarse pitch
UNF	thread with fine pitch
UNEF	thread with extra fine pitch
UN	thread with constant pitch

	external	internal
Loose tolerance	1A	1B
Medium tolerance	2A	2B
Tight tolerance	3A	3B

Thread Profile Depth		
external	15,581 / TPI	
internal	13,748 / TPI

### G 1/2 A - LH

G - Cylindrical pipe thread, ISO 228/1

R - Conical pipe thread, ISO 7/1

Pipe diameter, not thread diameter

Left or right handed thread

Tolerance class for external thread

### G - Whitworth / BSPP (P=parallel) Pipe Thread

All types and tolerance classes can be produced with W (Whitworth) thread turning and thread milling tools.

	external	internal
Loose tolerance	A	only one
Tight tolerance	B	class

To get a pressure tight-joint you need a seal ring between the shoulder of the external thread and the face of the internal thread.

### R - Whitworth / BSPT (T=tapered) Pipe Thread

All types and tolerance classes of conical threads can be produced with BSPT threading tools.

Rp	Internal cylindrical pipe thread
Rc	Internal conical pipe thread
R	External conical pipe thread

As the thread is conical it will be almost a pressure tight-joint, but to improve the sealing effect you need to use a thread seal tape.

Pitch is not written as it is determined of the diameter.

It is not necessary to write RH for right hand thread as almost all threads are right handed.

#### Thread Profile Depth

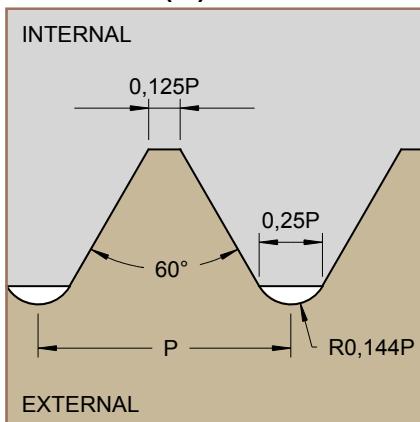

external	16,256 / TPI
internal	16,256 / TPI

Thread	Pipe diameter	Pitch TPI
1/16	7,723	28
1/8	9,728	28
1/4	13,157	19
3/8	16,662	19
1/2	20,955	14
5/8*	22,911	14
3/4	26,441	14
7/8*	30,201	14
